# **GEFRAN**MELT PRESSURE TRANSMITTERS KE SERIES PERFORMANCE LEVEL 'c'

Output 4...20mA

The KE Performance Level 'c' series of Gefran are pressure transmitters for using in high temperature environment. The main characteristic of this series is the capability to read temperature of the media up to 538°C (1000°F).

The constructive principle is based on the hydraulic trasmission of the pressure.

The fluid-filled system assures the temperature stability Nak (Potassium/Sodium).

The phisical measure is transformed in a electrical measure by means of thick film on stainless steel technology.

### MAIN FEATURES

- Stem material: 17-4 PH

#### GTP+ (advanced protection)

Coating with high resistance against corrosion, abrasion and high temperature

### AUTOZERO FUNCTION

All signal variations in the absence of pressure can be eliminated by using the Autozero function.

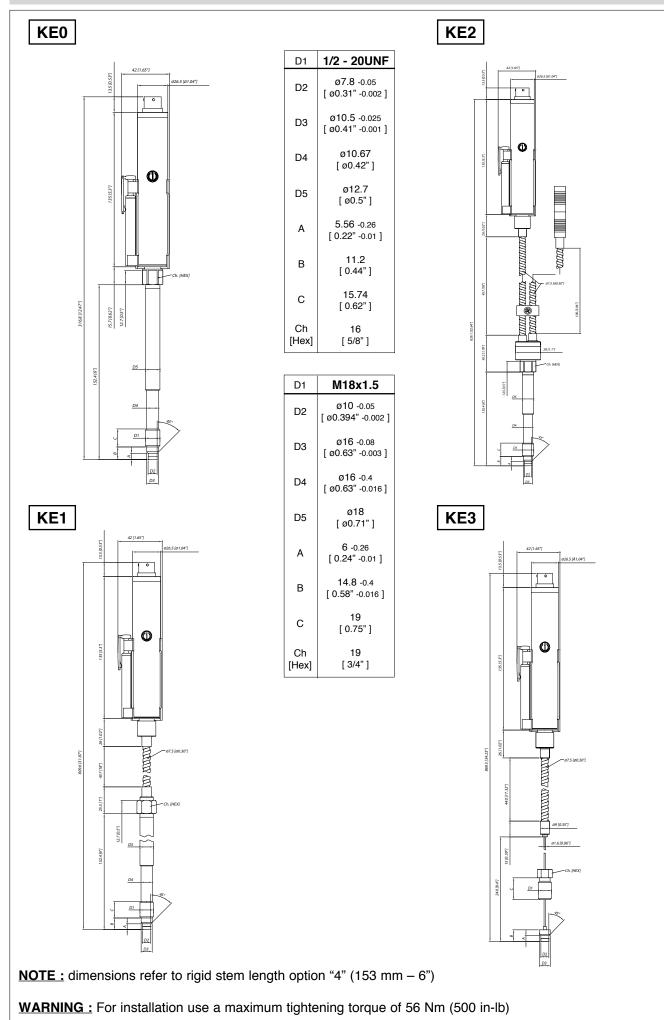

This function is activated by closing a magnetic contact located on the transmitter housing.

The procedure is permitted only with pressure at zero.

### NAMUR COMPLIANCE

## **AUTOZERO FUNCTION**

The sensors are tested according to Namur NE21 recommendations. The same compatibility is valid for the NE43 Namur recommendation with the following sensor behaviour in case of breakdown:

· Cut cable: breakdown information as the signal is <3,6mA

· Device not connected: breakdown information as the signal is <3,6mA

· Broken power-supply: breakdown information as the signal is <3,6mA

or in case of performance problems:

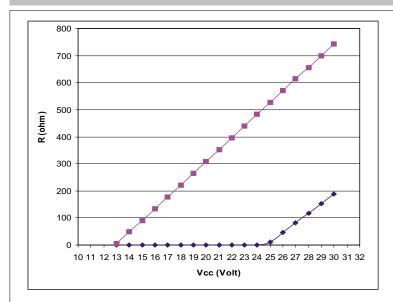

· most common failures on primary sensors: the signal goes to>21mA

Note: in all the remaining situations, the output signal is always included between 3,6 and 21mA.

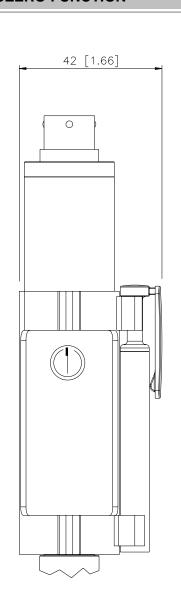

**Recommendation**: the error level set by the customer (e.g. maximum pressure value) has to be inside the nominal range

### LOAD DIAGRAM

The diagram shows the optimum ratio between load and power supply for transmitters with 4...20mA output.

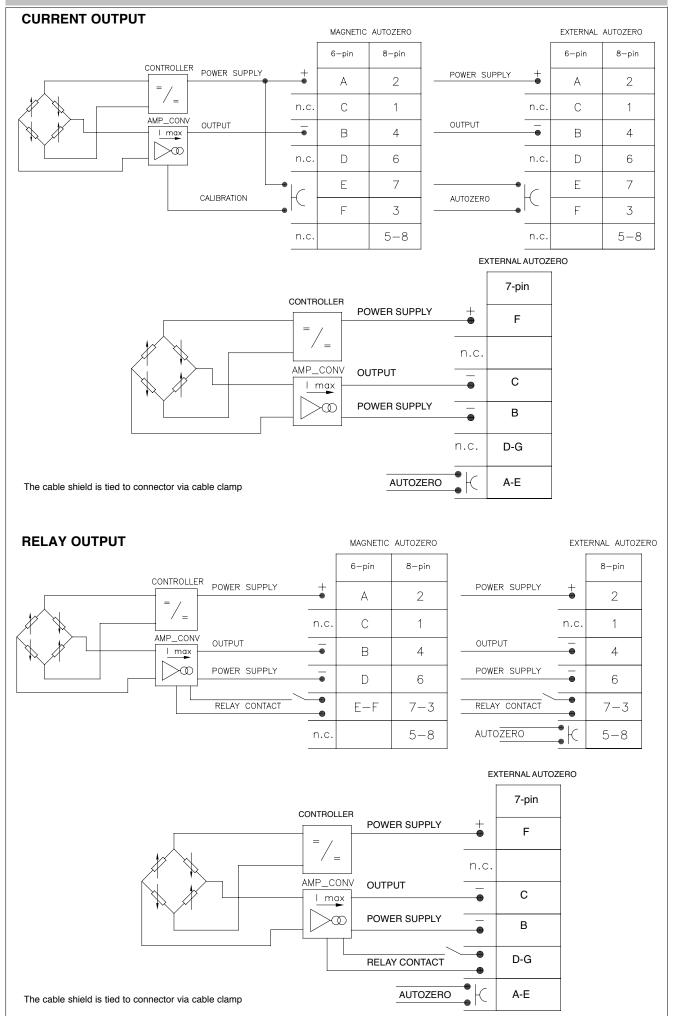

For correct function, use a combination of load resistance and voltage that falls within the two lines in the graph above.

The Autozero function is activated through a magnetic contact (external magnet supplied with the sensor).

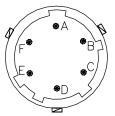

See the manual for a complete Autozero function explanation.
